roadmap validations

New things requested

#4 Alerts delivered into the chat tool people use on shift

Customer

Unclear — needs Alex Kim

Lumen Devices: 2

priority 2

Alerts that arrive by email are not seen, because nobody on the floor reads email during a shift. Alerts need to land in the chat tool the shift already has open.

Lumen Devices: "I want them in Teams, not by email. Nobody here reads email during the shift."

Marc Olsen · call 1004

#9 Flag numbers that look implausible

Customer

Not planned

Acme Foods: 2

priority 2

When a reading is wrong, nothing says so, and people act on it for a full day before anyone notices. Users want obviously implausible values flagged automatically so trust in the data survives a bad reading.

Acme Foods: "A wrong number I trust is worse than no number."

Sam Whitfield · call 1005

#10 In-product screen showing what personal data is stored

Implementation

Not planned

Halden Pumps: 2

priority 2

Employee representatives will not sign off on a policy document; they want to be shown, live in the product, exactly what is recorded about an individual operator. Without it the rollout cannot start.

Halden Pumps: "This is the condition the whole rollout hangs on. Everything else we can work around."

Priya Nair · call 1003

Feedback on what we ship

GAP #3 Let customers edit the downtime reason-code list

Prospect, Customer

Not planned

Acme Foods: 2

priority 4

The list of downtime reason codes is fixed and can only be changed by support, so it drifts out of date and operators dump unmatched stops into 'other'. Customers want to add, retire and group reasons themselves so downtime analysis stays usable.

Acme Foods: "My CI lead still cannot edit the stop reason list. She has asked me three times."

Dana Ruiz · Sam Whitfield · call 1001 call 1005

GAP #8 Create and remove users in bulk

Implementation

Unclear — needs Alex Kim

Halden Pumps: 2

priority 2

Accounts can only be created one at a time in the admin panel, which does not scale past a couple of lines and produces typos. Admins want bulk import, or accounts that follow the company directory as people move between lines.

Halden Pumps: "You are asking me to create fifty-two users by hand. That is not sustainable at seven lines."

Priya Nair · call 1003

GAP #12 Scheduled data feed into the customer's own warehouse

Prospect Deferred (Public API) Vertex Motors: 2 priority 2

Getting the numbers out means a person clicking download, so the data cannot live inside the customer's own reporting stack. They want an endpoint their systems can pull from on a schedule.

Vertex Motors: "We want the raw numbers in our own warehouse. Not a CSV someone downloads. An endpoint we can pull from every night."

Tom Becker · call 1002

GAP #13 Separate planned maintenance from unplanned downtime

Customer On roadmap — discovery (Maintenance-system integration) Lumen Devices: 2 priority 2

Planned maintenance is counted as availability loss, so the availability figure looks wrong to plant leadership and the dashboard cannot be shown in management meetings. Planned stops need to be excluded or reported separately.

Lumen Devices: "I need that. As long as the number looks wrong, I can't show it in the factory meeting."

Marc Olsen · call 1004

GAP #17 Choose when the weekly report is generated

Implementation Not planned Halden Pumps: 1 priority 1

The weekly report runs on a fixed schedule that does not match every plant's week, so it consistently misses the shift that opens the week. Customers want to set the day and time themselves.

Halden Pumps: "Our week starts Sunday night with the late shift, so the report always misses it."

Priya Nair · call 1003

GAP #19 Weekly report stays legible when printed large

Customer Not planned Lumen Devices: 1 priority 1

The weekly PDF is printed and pinned to a notice board, but the layout does not scale up, so the type is too small to read from standing distance.

Lumen Devices: "The font is too small when printed on A3. Not a big deal."

Marc Olsen · call 1004

AMPLIFY #6 Compare a line against the same day last week

Prospect Shipped (Line dashboard) Vertex Motors: 2 priority 2

The like-for-like day comparison already in the dashboard replaces a spreadsheet the customer had been maintaining by hand for a year — worth leading with, because it removes a recurring weekly task rather than adding a new screen.

Vertex Motors: "That is the argument I have been trying to make with a spreadsheet for a year."

Tom Becker · call 1002

Bugs spotted

- **Bug — output double-counted after a line restart** — After a line restart the counter reported roughly double the real output for a full day. Reported as fixed on the call; logged because recurrence would matter. (Acme Foods: 2 · Sam Whitfield · [call 1005](#))
- **Bug — line filter resets when the date range changes** — Filtering the dashboard to one line and then changing the date range silently returns the view to all lines, so a user can read the wrong figures without noticing. (Halden Pumps: 1 · Priya Nair · [call 1003](#))

#1 Read-only view of line status on a phone

Prospect, Customer

Unclear — needs Alex Kim (Mobile layout Q3 is read-only)

Acme Foods: 2, Vertex Motors: 2

priority 8

Supervisors who spend the shift on the floor have no workstation, so they never see line status while they could still act on it. They want to check the line from the phone already in their pocket; read-only is enough.

Vertex Motors: "Half my supervisors do not sit at a desk. They have a phone in their pocket and that is it."

Acme Foods: "We are there on line three. Not on line one, because line one's supervisor does not sit at a computer."

Tom Becker · Sam Whitfield · call 1002 call 1005

#2 Surface recurring stop patterns automatically

Prospect, Customer

On roadmap — discovery (Root-cause suggestions)

Acme Foods: 1, Vertex Motors: 1

priority 4

Repeating stops are only noticed when somebody happens to scan several days of the log by eye. Users want the system to point out the pattern itself — same station, same shift, three days running — rather than only categorising stops.

Vertex Motors: "If the system spotted that and said it out loud, I would trust it more than any chart."

Acme Foods: "It was seeing the same stop reason three days running. Nobody had noticed."

Tom Becker · Sam Whitfield · call 1002 call 1005

#7 Compare the same line across shifts and crews

Customer

On roadmap — committed (Shift comparison view, Q2)

Lumen Devices: 2

priority 2

Differences between crews on the same line are invisible today, and a customer has already promised their own management a shift comparison by April.

Lumen Devices: "I told the plant manager we'd have them in April."

Marc Olsen · call 1004

#11 One view across all plants

Prospect, Customer

On roadmap — discovery (Multi-site rollout)

Acme Foods: 1

priority 2

Data stops at the plant boundary, so a regional manager has to open one account per site. They want every plant on a single screen.

Acme Foods: "He wants all four plants on one screen."

Dana Ruiz · Sam Whitfield · call 1001 call 1005

#14 Single sign-on with the corporate identity provider

Prospect

On roadmap — committed (Single sign-on / SAML, Q3)

Vertex Motors: 2

priority 2

Enterprise IT will not approve a tool that keeps its own local accounts. SSO through the company identity provider is a security-review gate, not a preference.

Vertex Motors: "I am not saying no. I am saying it is a gate, not a wish."

Tom Becker · call 1002

#15 Tell me when the line drifts, during the shift

Prospect

On roadmap — committed (Real-time alerts, Q2)

Acme Foods: 2

priority 2

Shortfalls are discovered hours later from a manual count or the next morning's report, when nothing can be done about them. Users want to be told while the shift is still running.

Acme Foods: "That is the difference between us running a pilot and us not running a pilot."

Dana Ruiz · call 1001

#18 Read planned stops from the maintenance system

Customer

On roadmap — discovery (Maintenance-system integration)

Lumen Devices: 1

priority 1

Tagging which stops were planned is manual, even though the work orders already exist in the maintenance system. Reading them would classify those stops automatically.

Lumen Devices: "If you could read that, the assignment would be automatic."

Marc Olsen · call 1004

Needs your call

Alerts delivered into the chat tool people use on shift

Real-time alerts is committed for Q2 but the scope does not say which delivery channels are included — so this is either roadmap validation or separate, unplanned work.

→ **Confirm whether chat delivery is inside the Q2 alerts scope.**

Create and remove users in bulk

Unclear whether the committed Q3 SSO / SAML item also brings directory-driven provisioning, or whether bulk import is separate work Halden needs before rollout.

→ **Confirm whether SCIM / directory sync is in the Q3 SSO scope.**

Read-only view of line status on a phone (rank 1)

The committed Q3 Mobile layout is read-only, but Acme's pilot success criterion is supervisors acting during the shift — read-only may not satisfy the criterion this row is ranked on.

→ **Confirm whether the Q3 Mobile layout includes taking action, or viewing only.**

Planned maintenance — two rows kept separate

"Separate planned maintenance from unplanned downtime" and "Read planned stops from the maintenance system" both map to the Maintenance-system integration idea and may be one need.

→ **Decide whether excluding planned maintenance can ship without the integration; if not, merge (combined priority 3).**

Two versions of this run were written to the workbook

A second, independently-worded set of the same 19 signals was appended by a parallel run; it was removed and preserved in logs/duplicate-append-2026-08-02.md, and three scores differ between the versions.

→ **Confirm which run owns this workbook and settle the three differing scores.**

Cross-call themes

Downtime data is only as trustworthy as the reason list behind it — stale codes, 'other' as a catch-all, and planned maintenance counted as loss all point at the same root.

Acme Foods discovery (1001), Acme Foods pilot review (1005), Lumen Devices weekly (1004) · Acme Foods, Lumen Devices

The people who should act on the data do not sit at a desk: phone access and alerts in the shift's chat tool decide whether anything actually changes on the floor.

Vertex Motors demo (1002), Acme Foods pilot review (1005), Lumen Devices weekly (1004) · Vertex Motors, Acme Foods, Lumen Devices

Customers want the system to tell them something, not just show them charts — pattern detection, drift alerts and flagging implausible numbers were all asked for unprompted.

Acme Foods discovery (1001), Vertex Motors demo (1002), Acme Foods pilot review (1005) · Acme Foods, Vertex Motors

IT and employee representatives, not the buyer, hold the gate: SSO, bulk provisioning and a data-transparency screen were each framed as conditions of deployment.

Vertex Motors demo (1002), Halden Pumps rollout planning (1003) · Vertex Motors, Halden Pumps

5 calls processed (2 prospect · 1 implementation · 2 customer) · est. review time saved 1.2 h, assuming 15 min to review one call by hand — an assumption from config, not a measurement · Rank movements: first run against an empty matrix, so all 19 rows are new and there is no prior ranking

to compare. Highest new entries: #1 Read-only view of line status on a phone (priority 8), #2 Surface recurring stop patterns automatically (4), #3 Let customers edit the downtime reason-code list (4).
