CALLS PROCESSED

5

2 prospect · 1 implementation · 2 customer

EST. REVIEW TIME SAVED

1.2 h

Assumption: 15 min to review one call by hand (set in config — an estimate, not a measurement)

SIGNALS ADDED / MERGED

19 / 4

19 rows created; 4 took a second mention instead of becoming duplicate rows

CONSEQUENCE ATTACHED

68%

13 of 19 ranked signals have ≥1 customer at importance 2 — ranking follows real problems, not enthusiasm

DISTINCT ACCOUNTS

4

Acme Foods · Vertex Motors · Halden Pumps · Lumen Devices

DEMAND WITH NO ROADMAP HOME

47%

9 of 19 ranked signals are Not planned, Deferred, or awaiting your ruling

OPEN QUESTIONS

5

Median 0 days open — all raised by this week's first run. Nothing stale yet.

BRIEFS DRAFTED / UPDATED

0

No signal met both threshold conditions this week — see section 7

SIGNALS TRACKED

19

0 rows closed as out of scope; 2 are bugs and never trigger briefs

Verdict. Five calls became nineteen evidence-backed rows across four accounts, two-thirds of them carrying a stated consequence rather than a wish — the backlog is driven by customer problems, not by volume. The number to sit with is **47%**: nearly half of ranked demand has nowhere to live on the roadmap, and the heaviest concentration of it comes from accounts that already pay you. The constraint this week is *breadth* — every unplanned item is carried by a single account, which is why nothing has crossed the brief threshold yet.

2 Movers

rank rises and falls vs. last week

No previous snapshot — movements skipped this week

looked for snapshots/matrix-2026-W30.json

This is the first weekly run against this matrix, so there is no prior state to compare ranks against. Nothing here is a rise or a fall; every rank below is a starting position.

snapshots/matrix-2026-W31.json has been written with all 19 ranked signals (signal, rank, mentions, priority, type, audience, roadmap status). Next week's digest will report real movers against it. Snapshot retention: 1 of 8 kept — nothing to prune.

RANK	SIGNAL	AUDIENCE	MENTIONS	PRIORITY
1	Read-only view of line status on a phone	Prospect, Customer	2	8
2	Surface recurring stop patterns automatically	Prospect, Customer	2	4
3	Let customers edit the downtime reason-code list	Prospect, Customer	2	4
4	Alerts delivered into the chat tool people use on shift	Customer	1	2
5–19	Eleven rows at priority 2, then four at priority 1	mixed	1–2	2 → 1

Baseline only — full row-level state is in the snapshot JSON and in signal-matrix.xlsx.

3 Decisions for you

the punchline — 11 items · part 1 of 2

RETENTION RISK marks a New feature or Enhancement — Gap raised *only* by accounts that already pay you. That is qualitatively different from prospect demand: a prospect asking is upside; a live customer asking is something you already sold them living without. Ordered by what it costs you to leave undecided, not by rank.

SIGNAL	RECOMMENDED ACTION	WHY — ONE LINE	BRIEF
Read-only view of line status on a phone Prospect + Customer · Acme 2, Vertex 2 · rank 1, priority 8	Resolve roadmap conflict	Your highest-ranked row is validating Mobile layout (Q3) , which is read-only — but Acme's pilot success criterion is supervisors <i>acting</i> during the shift. If Q3 is view-only, the top of your backlog is only half-covered, and the open half clears the brief threshold on the spot (importance 2 from two accounts).	none — split first
Let customers edit the downtime reason-code list Customer (live) · Acme 2 · rank 3, priority 4	Run discovery RETENTION RISK	Acme says they will struggle to defend the renewal if the list stays frozen, and their CI lead has asked three times. Status is Not planned . Highest-ranked item on the board with no roadmap home at all.	none — 1 account
In-product screen showing what personal data is stored Implementation · Halden Pumps 2 · priority 2	Promote to PRD	"This is the condition the whole rollout hangs on." Contract signed, and the works council will not accept a policy document. Not planned . One account, but it gates revenue you have already booked — the only item here I would write up despite failing the evidence threshold.	none — 1 account
Separate planned maintenance from unplanned downtime Customer (live) · Lumen Devices 2 · priority 2	Run discovery RETENTION RISK	The availability number reads wrong, so Lumen cannot show the dashboard in their factory meeting — a paid product currently unusable where it matters. Sits under Maintenance-system integration (discovery) ; decide whether excluding planned stops can ship without the integration.	none — 1 account
Alerts delivered into the chat tool people use on shift Customer (live) · Lumen Devices 2 · rank 4, priority 2	Resolve roadmap conflict RETENTION RISK	Blocked on a ruling only you can make: does the committed Real-time alerts (Q2) scope include chat delivery, or email only? Email-only alerts are alerts nobody on the floor sees.	none — status unclear
Flag numbers that look implausible Customer (live) · Acme Foods 2 · priority 2	Run discovery RETENTION RISK	"A wrong number I trust is worse than no number" — said in the same review as a real double-counting bug that ran for a full day. Not planned . This is trust in the product, not a feature.	none — 1 account

Continued overleaf — five further decisions, including two promises made to customers that the roadmap does not back.

3 Decisions for you — continued

part 2 of 2 · includes promises the roadmap does not back

SIGNAL	RECOMMENDED ACTION	WHY — ONE LINE	BRIEF
Create and remove users in bulk Implementation · Halden Pumps 2 · priority 2	Resolve roadmap conflict	Fifty-two users by hand at seven lines. Whether this is a problem at all depends on whether SSO/SAML (Q3) brings SCIM directory sync — if it is authentication only, Halden needs unplanned work before rollout.	none — status unclear
Scheduled data feed into the customer's own warehouse Prospect · Vertex Motors 2 · priority 2	Resolve roadmap conflict	Public API is deferred until three customers commit to building against it. Vertex is asking for exactly that on an open deal — count them as commitment #1, and note that the parking rule is now being tested by a live opportunity.	none — 1 account
Promise: shift comparison "in April" Customer (live) · Lumen Devices — made on call 1004	Resolve roadmap conflict	Lumen told their plant manager April; the roadmap says Shift comparison view, Q2 . April sits inside Q2 but is a tighter date than you have committed to, and your own account manager confirmed the month on the call. Either back the date or correct it this week.	none — validation row
Promise: multi-site "coming later this year" Prospect + Customer · Acme Foods — made on call 1005	Resolve roadmap conflict	Acme's plant manager told his boss multi-site was coming this year. Multi-site rollup is discovery only, no date . He was corrected on the call — make sure that correction survives contact with his boss, because his boss is the one asking.	none — validation row
Weekly report legibility at A3 · weekly report schedule Customer (live) Lumen 1 · Implementation Halden 1 · priority 1 each	Park RETENTION RISK	Both are real and both are cheap, but neither customer attached a consequence — "not a big deal", in their own words. Flagged under the standing lens because they come only from paying accounts; parked because nothing hangs on them.	none — importance 1

If you only do one thing. Four of these eleven are blocked on a scope ruling that costs you a sentence each — mobile "act vs. view", chat delivery in Q2 alerts, SCIM in Q3 SSO, and whether April is a date you can stand behind. Answer those four and five matrix rows re-classify themselves, one of them straight into an opportunity brief. Everything else on this list needs work; those four only need a decision.

4 Roadmap validation this week

planned items customers confirmed without being asked

PLANNED ITEM	ACCOUNTS	CONFIRMED BY	WHAT THEY SAID IT DECIDES	VERDICT
Mobile layout — committed Q3	2	Vertex Motors (2) Acme Foods (2)	Two accounts, two mentions, both at importance 2 — the strongest evidence in the matrix. Supervisors with no workstation never see the line in time to act.	PULL FORWARD scope question open — \$5
Single sign-on / SAML — committed Q3	1	Vertex Motors (2)	"It is a gate, not a wish." A security-review gate on an open deal, not a preference.	PULL FORWARD gates a deal in flight
Root-cause suggestions — discovery	2	Vertex Motors (1) Acme Foods (1)	Raised unprompted by two accounts in one week — one describing a stop pattern that ran three days before anyone noticed. No consequence yet: interest, not condition.	COMMIT CANDIDATE 2 accounts, no date
Real-time alerts — committed Q2	1	Acme Foods (2)	"The difference between us running a pilot and us not running a pilot." A pilot condition — the commitment doing exactly the job it was made for.	CONFIRMED
Shift comparison view — committed Q2	1	Lumen Devices (2)	Confirmed, and already promised onward: "I told the plant manager we'd have them in April." Validation and exposure in the same sentence.	CONFIRMED date promised — \$3
Maintenance-system integration — discovery	1	Lumen Devices (2, 1 — two rows)	One account, but the strongest consequence in the discovery set: the availability figure is wrong, so the dashboard cannot be shown to plant leadership.	CONFIRMED 1 account — hold
Multi-site rollup — discovery	1	Acme Foods (1)	Mentioned in both Acme calls, but explicitly not a condition — "he will ask", not "we need it".	HOLD but a promise was made

Parking lot holding: **On-premise deployment** and **Custom report builder** drew no mention at all. **Public API** drew one, from Vertex Motors.

5 Needs your attention

median 0 days open · nothing stale yet

Three of these block a field in the matrix — the agent refused to guess rather than mis-classify a row quietly. All raised 2026-08-02. needs-review.md itemises four; Run metrics counts five — the difference is the promise below.			
MATRIX · RANK 1	Does Mobile layout (Q3) include acting, or only viewing?	If view-only, the top-ranked row splits — and the open half qualifies for a brief immediately.	0 days
MATRIX · RANK 4	Does the Q2 Real-time alerts scope include chat delivery, or email only?	Inside the commitment this is a validation row; outside it, unplanned work for a live customer.	0 days
MATRIX · RANK 8	Is SCIM / directory sync inside the Q3 SSO scope?	If yes, Halden's problem disappears in Q3; if SAML is authentication only, bulk import is unplanned work needed <i>before</i> rollout.	0 days
MERGE QUESTION	Are ranks 13 and 18 one row or two?	Same account, same call, same discovery item; kept apart per the close-calls rule. Merged, priority becomes 3.	0 days
PROMISE · LUMEN	Is April a date you can stand behind for shift comparison?	The only open thread carrying an external commitment — see §3.	0 days

Nothing is **STALE — DECIDE OR DROP** yet; that flag applies at 2 weeks open.

6 Questions for the next calls

5 threads · send to the account owner before their next call

Every unplanned item in this digest is carried by exactly one account. The fastest way to change that is not more calls — it is asking the same question in two more rooms. These are the five threads where an answer would move a row, close a gap, or cross a threshold.

Acme Foods — reason-code editing & the renewal

owner: Sam Whitfield · retention

- How many stops landed in "other" last month, and which reason codes are missing that would have caught them?
- If your CI lead could edit the list herself, who signs off on a change — her alone, or does it need plant approval?
- What specifically has to be true at renewal for you to defend this internally? Name the two things.

Vertex Motors & Acme Foods — the phone: viewing vs. acting

owners: Tom Becker, Sam Whitfield · unblocks rank 1

- On the phone, what is the *first thing* a supervisor does after seeing the line is down — is looking enough, or do they need to tag the stop right there?
- Which two numbers must be on that screen for it to be worth unlocking a phone for?
- (Vertex) How many of your supervisors have no workstation at all — and (Acme) would line one's supervisor use it during the shift, or after it?

Halden Pumps — works council & provisioning

owner: Priya Nair · gates a signed rollout

- What exactly must the transparency screen show the works council — the list of fields collected, or a live person record they can open?
- Does your identity provider support SCIM? If directory sync existed, would the 52-user problem disappear entirely, or only shrink?
- What rollout date does the works-council sign-off currently block, and what is the cost of missing it?

Lumen Devices — planned maintenance & the alert channel

owner: Marc Olsen · retention

- If we simply excluded planned stops from the availability figure — no maintenance-system integration — would the number be right enough to show in the factory meeting?
- How are planned stops recorded today: a work order in the maintenance system, or someone's judgement after the fact?
- Which Teams channel would alerts land in, who is actually in it on the night shift, and what would they do with an alert at 02:00?

Vertex Motors — the warehouse feed and the API rule

owner: Tom Becker · tests a parked decision

- What system consumes the nightly pull, and which fields does it need on day one?
- Would a scheduled push to your storage be acceptable, or does it have to be an endpoint you call?
- Is this a condition of signature, or a year-one requirement? The answer decides whether Public API stays parked.

Capped at the 5 most valuable threads. Three further discovery gaps are open and did not make the cut this week: the weekly-report schedule (Halden), A3 print legibility (Lumen), and what "implausible" should mean numerically (Acme).

7 Briefs drafted or updated this week

0 drafted · 0 updated

Nothing crossed the threshold — and that is a finding, not a gap

A brief is drafted only when **both** tests pass: (a) the signal has no roadmap home — type *New feature* or *Enhancement* — *Gap*, status *Not planned*, *Deferred*, or a shipped feature with a material gap; and (b) it is carried by **3+ accounts**, or at importance 2 by **2+ accounts**. Nineteen ranked rows were tested. Six passed (a). One passed (b). None passed both.

The pattern is unambiguous: **every unplanned request in the matrix is carried by exactly one account**. You do not have a prioritisation problem this week, you have a corroboration problem — which is what \$6 is for. Ask the Acme reason-code question at Lumen, and the Halden data-transparency question at Vertex, and two of the rows below cross on their own.

NEAREST MISS	PASSES (A)?	PASSES (B)?	WHAT WOULD TIP IT
Read-only view of line status on a phone	No — Roadmap validation	Yes — imp. 2 × 2 accounts	The only row with the evidence. It needs your \$5 ruling: if Mobile layout Q3 is view-only, the "act on the floor" half becomes an Enhancement — Gap with no home, and drafts immediately.
Let customers edit the downtime reason-code list	Yes — Not planned	No — 1 account	One more account at any importance, or a second at importance 2. Likeliest source: Lumen or Halden.
In-product personal-data screen	Yes — Not planned	No — 1 account	Any second account with a works council. Recommended for a PRD anyway (\$3) — it blocks signed revenue.
Flag numbers that look implausible	Yes — Not planned	No — 1 account	A second account describing a bad reading they acted on.
Scheduled data feed into own warehouse	Yes — Deferred (Public API)	No — 1 account	Two more accounts committing — precisely the rule that parked it. Vertex is #1 of 3.
Weekly report schedule · A3 legibility	Yes — Not planned	No — 1 account, imp. 1	Nothing yet. Neither has a consequence attached; parked.

Opportunity briefs/ is empty by design this week. No existing brief was overwritten, and no human edit was touched.
